SUMMARY

Technical product manager (MS Information Systems, Northeastern) who owned the breast cancer journey of a HIPAA-compliant risk-screening platform from specs to a beta release and paid pilot, and specified and evaluated its AI features. I prototype with Claude Code and audit AI systems in my graduate work.

SKILLS

Product Ownership: Roadmap, PRDs, user stories, acceptance criteria, API contracts, RICE prioritization, Scrum, UAT
AI Products: LLM evaluation, human review, prompt design, retrieval-grounded assistants, OCR/LLM/VLM extraction
Research & Analytics: User interviews, voice of customer, GA4, KPI dashboards, TAM/SAM/SOM, SQL, R, Python
Tools & Domain: Claude Code, Jira, Asana, Confluence, Figma, Notion, Excel; HIPAA, FHIR, EHR integration

EXPERIENCE

Technical Product Manager (Co-op), Stage Zero Health, *Cambridge, MA* Aug 2025 - Dec 2025

- Shipped a risk-score, explanation and referral journey to beta cohorts by owning the roadmap and breast cancer journey.
- Gave engineering build-ready specs by writing user stories as Jira tickets, acceptance criteria and API contracts.
- Aligned model, backend and client teams on one architecture by authoring the platform's technical specification.
- Scoped Phase 1 care navigation by defining and prototyping the MVP features in Figma and Claude Code.
- Turned health and genetic reports into structured data by defining the schema, prompts and field-level evals.
- Grounded an AI assistant in each user's risk results and evaluated it for groundedness, tone, safety and accuracy.
- Cut intake friction by defining EHR pre-fill over FHIR and real-time insurance verification via API, under HIPAA.
- Measured a 6-week paid pilot against pre-agreed targets by tracking retention and churn in GA4 and a KPI dashboard.
- Reprioritized the backlog weekly by running user interviews, surveys, Zoom calls and demos with pilot users.
- Won pilot-user sign-off before release by conducting UAT and writing test plans and user documentation.
- Supported the founder's go-to-market on launch, positioning, pricing and target users with decks and one-pagers.

Pega Developer, Bluevoir, *Hyderabad, India* Feb 2024 - Jul 2024

- Enabled real-time WHO reporting by building a microbial-detection case-management app on Pega App Studio.
- Governed case routing and approvals by defining the case lifecycle, role-based access control and decision tables.
- Supported clinical, lab and reporting users with role-specific portals and ticketed issue fixes, maintaining HIPAA.

Pega Business Architect, Bluevoir, *Hyderabad, India* Jan 2023 - Jun 2023

- Gave the delivery team approved requirements by writing BRDs signed off by the solution architect and product owner.
- Configured HR hiring, onboarding and leave workflows in Pega from user stories and specs I wrote with stakeholders.

Graduate Teaching Assistant, INFO 6500, Northeastern University, *Boston, MA* Jan 2026 - Apr 2026

- Helped engineering students grasp operational risk by translating failure modes and quality controls into plain guidance.
- Supported each student's progress as a primary point of contact, adapting explanations to each technical background.

PROJECTS

SaysWho. Built solo a Chrome extension and Python backend that checks whether an AI answer's cited sources support its claims; the LLM judge must quote a source span that string-matches (24 answers, 158 claims) (GitHub).

FlukeCheck. Audited my own LLM classifier on 800 records for calibration, robustness, fairness and prompt injection against pre-committed thresholds; reported the negative result (calibration error 0.186 vs. 0.05 target) (GitHub).

EDUCATION

MSc, Information Systems Aug 2026
Northeastern University, Boston, MA. GPA 3.76/4.00. Business Analysis, Systems Thinking in Healthcare, Software Quality

BTech, Electronics and Instrumentation Engineering Jul 2023
Keshav Memorial Institute of Technology, Hyderabad, India
