Boston, MA (open to relocation to Liberty Lake, WA) | Authorized to work in the U.S. (F-1 OPT)

EXPERIENCE

Technical Product Manager Intern

Cambridge, MA

Stage Zero Health

Aug 2025 – Dec 2025

- Inherited a Breast Cancer Journey flow that returned no output to users; owned the **product roadmap from concept to release**, translating customer problems into **requirements and technical specifications**, and shipped a milestone journey producing a risk score, explanation, and screening referral for a **600+ user** waitlist and **40+ beta testers**.
- Needed a defensible model tiering strategy with no existing spec; authored the **technical specification** for a staged risk-model ensemble (Gail free tier, **BOADICEA** paid genetic tier spanning BRCA1/2, PALB2, CHEK2, ATM, and a 313-SNP polygenic score) and partnered with **Software Engineering** to define **API contracts** and **event-driven** milestone triggers that shipped to beta.
- Patients could not interpret their own risk scores; defined product requirements for a production-ready **Gemini-powered LLM assistant**, including conversation flows, knowledge boundaries, and response guardrails, then **prototyped and validated** prompt behavior against edge cases before handoff.
- Reduced friction in a 45–60 question intake funnel by specifying **Epic FHIR** pre-fill and **Change Healthcare API** coverage checks, and built **4 personas** from unused prior research to drive persona-based **workflow automation** across Email and SMS via **Twilio, SendGrid, and Customer.io**.
- Owned quality and lifecycle optimization end to end: ran two-week sprints and **bug triage** in **Jira and Asana** with engineering and beta testers to **test and validate** each release, and tracked **adoption, activation, DAU, and MAU** in **GA4** to reprioritize the backlog.
- Tracked funnel metrics (**activation, retention, churn**) and reported out on a **6-week, 30-user paid pilot** of the at-home breast cancer risk screening product, documenting **18 paying users retained through week 6 (60%)** and a drop in weekly churn from **10% to 5%** that informed backlog prioritization.

Pega System Architect

Hyderabad, India

Bluevoir Technologies

Jan 2024 – Jun 2024

- Design cycles on a Microbial Threat Detection application were blocking delivery; architected case-management workflows on **Pega GenAI Blueprint** using **AI-assisted tooling to accelerate** design, cutting design time **30%** and enabling faster WHO-coordinated containment of public-health threats.
- Configured business rules with decision tables and aligned investigation workflows directly with public-health **stakeholders**, cutting case processing time **25%**.

Business Analyst

Hyderabad, India

Bluevoir Technologies

Jan 2023 – Jun 2023

- Requirements for HR applications were undocumented and contested across owners; gathered and refined specifications by engaging product owners, authored **user stories and functional specs**, and translated them into **Pega BPM** configurations deployed end to end.

PROJECTS

Improving Discovery of Kick

Self-directed

Product Teardown – Video Platform Discovery, Trust & Safety

Jun 2026

- Ran a hypothesis-driven, outside-in teardown of kick.com's new-viewer discovery on a live **cloud video platform** (82 min, 31 captures) and traced two content-safety controls to a render-layer-only implementation that leaked on search and direct URLs.
- Proposed and **prototyped 7 fixes in Figma**, ordered cause before symptom, and defined success metrics on time-to-first-watch and D7 new-viewer retention.

EDUCATION

Northeastern University

Boston, MA

M.S., Information Systems, GPA 3.76/4.00

Sep 2024 – Aug 2026

JNTU

Hyderabad, India

B.Tech, Electronics and Instrumentation Engineering

Sep 2019 – Aug 2023

SKILLS

AI & Technical: Claude Code, LLM prompting & guardrails, Generative AI, workflow automation, Python, SQL, Java, GitHub, Vercel, Supabase, GA4, VS Code

Product: Roadmap & vision, PRDs & technical specs, requirements analysis, user stories, API contracts, bug triage, RICE, prototyping (Figma)

Cross-Functional & Delivery: Jira, Asana, Miro, Notion, Slack, Salesforce, Pega
