EDUCATION

Master of Science, Information Systems, Northeastern University, Boston
GPA: 3.76/4.00

Sep 2024 - Aug 2026

B.Tech, Electronics and Instrumentation Engineering, JNTU, Hyderabad

Sep 2019 - Aug 2023

SKILLS

Product	PRDs & specs, User stories, Roadmap & backlog, Two-week sprints, Bug triage, RICE, Prototyping
Research & Discovery	User interviews, Survey & interview synthesis, Personas, Journey mapping, TAM / SAM / SOM, Market research, Product teardowns
Technical & Tools	GA4, Jira, Asana, Miro, Figma, Twilio, SendGrid, Claude Code, Notion, Microsoft Excel, GitHub, Vercel, SQL, Java, Supabase, VS Code, Slack

CASE STUDIES

Technical Product Manager Intern
Stage Zero Health

Aug 2025 - Dec 2025
Cambridge, MA

- Owned the **Breast Cancer Journey** end to end, from a cold signup to a booked screening, turning an inherited login-and-questionnaire that returned nothing into a milestone journey that produces a risk score, explains it, and routes to a screening.
- Specced a **Gail** risk model against its published weights, then designed a staged, re-firing model **ensemble**: Gail free early, **BOADICEA** (BRCA1/2, PALB2, CHEK2, ATM, a 313-SNP polygenic score) behind a paid genetic tier; owned the API contracts and milestone triggers.
- Attacked a **45 to 60 question** funnel by speccing **Epic FHIR** pre-fill, a genetic vault for BOADICEA, and **Change Healthcare API** coverage checks so users saw insurance before booking.
- Built **4 personas** from prior unused research, mapped the journey in Miro, and shipped Insights, an SDOH assessment, a learning section, and per-persona Email/SMS via **Twilio, SendGrid, and Customer.io**.
- Ran market research and **TAM / SAM / SOM**, two-week sprints and triage in Jira and Asana, and GA4 activation, DAU, and MAU tracking.

EXPERIENCE

Pega System Architect
Bluevoir Technologies

Jan 2024 - June 2024
Hyderabad, India

- Cut design time by **30%** and enabled rapid, WHO-coordinated containment of public-health threats by architecting case-management workflows for a **Microbial Threat Detection (MTD)** application built on Pega GenAI Blueprint.
- Strengthened automated decision-making and cut processing times by **25%** for faster threat detection and WHO reporting by configuring business rules with decision tables, and managed investigation and MTAS case workflows with public-health stakeholders.

Business Analyst, Bluevoir Technologies

Jan 2023 - June 2023

- Improved HRMS requirement accuracy by engaging product owners to gather and refine specifications for employee hiring, onboarding, and leave-management applications, authoring user stories and functional specs.
- Reduced manual HR effort by translating business requirements into Pega BPM configurations and deploying end-to-end process-automation workflows with project teams.

TEARDOWN

Improving Discovery of Kick
Product teardown – discovery, trust & safety

Jul 2026
Self-directed

- Ran an outside-in teardown of **kick.com**'s new-viewer discovery (**n=1, 82 min, 31 captures**); a timed cold-start task took **~10 minutes** to surface nothing worth watching.
- Showed onboarding collected gender and country but changed nothing downstream: the same **10 channels** ranked before and after answering.
- Proved both content controls (Hide Slots & Casino, Block a creator) suppress at the **render layer only**, leaking on search and direct URLs.
- Proposed and prototyped **7 fixes** in Figma, ordered cause before symptom, measured on time to first watch and D7 new-viewer retention.
